

PROJECT PROFILE

The Heart Centre, Walton-on-Thames, Surrey

Works Packages: Waveform Ceilings, GRP Feature Bulkheads, Dry Lining & GRG, Car Park Soffit Lining.

Client: O & H Construction Properties

Architect: EPR

Main Contractor: O & H Construction Ltd

Value: £880K

Overview

This prestige Retail and Residential development stands as the centrepiece of Walton on Thames. O & H Construction selected Roskel with whom we had previously worked, to carry out high profile Mall Finishes.

Scope of Works

Mall Finishes:

Supply and installation of high level wave form ceilings constructed in British Gypsum. Gyptone Line 6 with multi- directional curves along the main mall. Curved & tapered light troughs as a central feature, along with light wells and additional areas of acoustic ceiling panels. Curved highly polished GRP Bulkheads with light trough detail to each side of the mall. Sloping metal canopy to entrance area formed with Luxalon 2400 x 300 metal plank system. Plaster cladding and fire shutters were also included within our subcontract package.

Car Park Soffit Lining:

To achieve the required thermal insulation to the residential building above we installed 10,500m² of 2400 x 1200 Promat TL board, bonded to 80mm Phenolic Foam insulation, creating a high quality ceiling finish serving a practical need.
